Antai Ground Mounting Solution

- Modular Kits for Customization**
 Easily customize and scale your installation with multiple 2x9 kits according to any specific requirements
- High-performance Material**
 Made from Antai's AL6A22-T6 aluminum, providing superior durability, corrosion resistance, and 20%-30% higher strength compared to the commonly used T5 aluminum
- Fast Installation**
 Pre-assembled components enable swift installation, reducing construction time and overall project costs

While a rooftop system typically has a capacity of 20kW, a ground system offers the flexibility to generate multiple 10kW power outputs based on the available land area.

Glen Morris
General Manager
at Smart Energy Lab

Ground mount system may be very popular in Australia for rural areas because people are running out of roofs and they want more solar. It is efficient and easy to install.

WHY ANTAI

ANTAI, the leading supplier of the whole industry chain of PV mounting systems, relying on its high performance product, continuous R & D investment and a full range of high-quality services, achieve cumulative solar racking shipments with 4.8GW in Australia, 25.4GW shipments worldwide, taking the leading position in the Australian distributed market.

Antai Roof Mounting Solution

■ Versatility

Allow for free combination and provide clamps suitable for various rooftop

■ High-performance Material

Made from Antai's AL6A22-T6 aluminum, providing superior durability, corrosion resistance, and 20%-30% higher strength compared to the commonly used T5 aluminum

■ Fast Installation

Pre-assembled components enable swift installation, reducing construction time and overall project costs

■ Design and Quote Without Hassle

Use our solar roof designing platform SolarAID, to simplify the design and quoting process for rooftop PV projects
